
Michael Baser

Michael's undergraduate degree in Criminology and Sociology from the University of Brighton was followed by professional experience in the local government and civil service. 4 years ago, starting his first Public Health England (PHE) role as Business Support Officer for the National Disease and Registration Service kindled his enthusiasm for public health. This was furthered through working as a Project Officer by collaborating with cancer analysts, academics, and clinicians on national [Be Clear on Cancer](#) early diagnosis campaigns. His subsequent Cancer Data Analyst entry level role advanced his analytical and communication skills through providing outputs for the [Radiotherapy Dataset](#) spanning the PHE and NHS agenda. His current role as Partnership Cancer Analyst involves developing insights on chemotherapy using the [Systemic Anti-Cancer Therapy Dataset](#). This includes operating statistical software to provide information on patterns of use for cancer drugs in routine NHS clinical care, and developing cancer focused outputs to monitor health indicator trends.

Michael's experience at PHE has provided real-world awareness around the significant progress that can be made towards reducing health inequalities and improving healthcare outcomes, to positively impact individuals and society. A desire to continue exploring this passion led him to enrol as a part-time MPH student at King's College London. The range of modules being studied, including Epidemiology and Global Health, have greatly enhanced his knowledge and skills in the field of public health.

In Michael's free time he enjoys baking, reading, and running, alongside coordinating an international team of public health volunteers for digital charity [Cov360](#) – an organisation that delivers audio-visual and written content to improve individual and collective decision making around health. His main interests are within cancer analysis, epidemiology, global health, and health inequalities.

Camila Carbone

Camila's background as a Clinical Dietitian in Peruvian public and private health sectors provided her with a profound knowledge of how social determinants of health contribute to the development of disease. She has faced challenges as varied as instructing mothers of preterm babies on milk production stimulation, educating institutionalised adolescents on a healthy diet prior to insertion to society, evaluating leukaemia patients in protective isolation and managing diets for terminally ill children. Thus, she developed a strong sense of multidisciplinary teamwork, and she strengthened her communication and interpersonal skills.

Her experience prompted her to pursue the Master's in Public Health at King's College London to further understand diseases and how to prevent them. Her studies on health economics, psychology and sociology enriched her perspective of health and disease. The Global Health module served to merge different health topics and consequently obtain a complex view of the global burden of disease while recognising individual and community health intersectionalities.

Camila is passionate about pursuing a career in qualitative research to tackle health inequalities.

Maschall Khanzadah

Maschall is currently completing a Master's in Public Health at King's College London. She graduated from London South Bank University with a bachelor's in Bioscience. During her undergraduate studies she conducted a systematic review on '*The Foetal Origin of Adult Diseases*'. Where it assessed whether a certain birthweight increases the risk of developing an adult disease later in adulthood. She also designed a group poster presentation on '*The prevention of Meningitis*'.

During her years in University she developed an interest and passion in Public Health, her degree allowed her to gain relevant knowledge into the field. Maschall has previously worked in hospital and university laboratories. She currently works as a Patient Administrator at The BMI Clementine Churchill Hospital. She has gained many skills, abilities and experiences during her work experiences, which include, communication skills, leadership skills, teamwork skills and the experience of working with patients.

The Master's in Public Health at King's College has enabled Maschall to develop and gain further knowledge into the area of Public Health, her main interest includes Global health and Infectious Diseases. She is passionate and eager to apply skills and knowledge learned from King's to the real world. These experiences have therefore affected her decision to dedicate herself to a career that would enable her to help others towards a better way of life. Maschall is keen on making a change and difference in others' lives, as this would make her happy.

Nyaradzo Muzah

After starting a graphic design degree at the London College of Communication, Nyaradzo decided that this was not the career for her. She decided to follow in the footsteps of her mother and father, who were both psychiatric nurses.

In 2010, Nyaradzo qualified with a nursing Diploma in adult nursing and has since worked in both primary care and community healthcare settings. During this time Nyaradzo has graduated from the University of Greenwich with a degree in Sexual Health, which included modules in Cytology and HIV.

Her most recent role has been as a senior sexual health nurse. She was previously one of the lead nurses in a specialist transgender clinic, a role that she thoroughly enjoyed as she has been able to learn a great deal about patients' experiences within healthcare.

Nyaradzo has recently completed her Master's in Public Health at King's College London. She has a keen interest in HIV and women's health, especially within African communities in England.

In her spare time, Nyaradzo enjoys drawing, hula hooping and reading.

Maheen Qureshi

Maheen completed her undergrad degree in dentistry. During her clinical training experience in several hospitals she observed inequalities in healthcare and decided to pursue Master of Public Health. She enhanced her knowledge in research by working as a research coordinator in the project "Evaluation of Poverty Eradication Initiative intervention in health care settings of Sindh Public Health Program (SPHP)" at Aga Khan University Karachi, Pakistan.

Studying MPH at Kings College London has expanded her knowledge regarding the challenges of healthcare systems and interventions to improve public health. Her interest is particular in the field of mental health and infectious diseases. She has also developed strong communication and analytical skills.

Maheen believes every individual deserves highest standard of mental and physical health. She is determined to bring sustainable solutions to improve health inequalities and core public health issues. She is looking forward to the new opportunities to apply her skills as a public health professional.

Asha Williams

Asha graduated from the University of East Anglia in 2016 with a degree in Physiotherapy and has since worked for 4 years in a North London NHS Trust. Through working with a variety of patients, presenting with wide ranging conditions, she has been able to gain knowledge of the impact health issues can have on the general public, and moreover, how the NHS engages with the communities it serves, attempting to tackle the issues most pertinent to them.

With this prior experience, enrolling on to the Public Health MSc (MPH) was a natural progression, allowing her to explore health and health systems in their many forms. Studying for her MPH whilst working part time allowed Asha to observe her public health teaching in real-life scenarios. The MPH developed her comprehension of current health structures as well as work with a wide range of professionals. The Global Health module, in particular, sparked an interest in researching social determinants of health and health inequalities. Personal hobbies, such as netball, have also developed Asha skills working within a team and working towards collective goals. She has enjoyed playing netball for the last 15 years, and currently plays in the London and South East Regional 1 league with her South East London club.

Asha hopes to be able to combine all of her experience by being able to consider public health issues through a physiotherapy lens, offering a unique perspective.
